

## OUR STORY

AMTAC's parent company, Advance Manufacturing Technology, has been a leader in precision manufacturing for over 35 years with customers including the Department of Defense, Bell, Hiller, and SpaceX. In 2009 our founder and CEO Anthony Barney purchased his first personal suppressor and was disappointed in its performance. With his expertise in firearms engineering and manufacturing he knew he could create a better product and set out designing solutions.

From his frustration came an improved suppressor design and soon Advance Manufacturing Tactical (AMTAC) was born. The suppressors are manufactured in a state-of-the-art, Department of Defense ITAR certified facility by some of the most experienced engineers and machinists in the industry.

Based out of Salt Lake City, UT., AMTAC builds suppressors that meet the needs of the most demanding shooters—durability, accuracy, and innovative designs that integrate seamlessly into your weapon system.

## TIMELINE

- 1976 Advanced Manufacturing Technology created. Customers eventually include the Department of Defense, Bell, ATK, Northrop Grumman, and SpaceX.
- 1980 The 1st CNC Machine comes to Utah. Advanced Manufacturing Technology becomes a leader in CNC machining.
- 2005 AMT becomes ISO 9001:2003 Certified and acquires Federal Firearms License (FFL) to make firearms components.
- 2009 AMTAC founder Anthony Barney buys first suppressor, and is disappointed by the design and performance.
- 2011 Anthony manufactures his first suppressor prototype for his own use.
- 2014 AMTAC's flagship, over-barrel suppressor known as the CQB is produced.
- 2014 An even shorter version of the original CQB is created (the CQBM) and the SNIPER model takes AMTAC's over-barrel design to heavy-barrel bolt guns and semi-automatic rifles.
- 2014 A direct-thread, end-mount suppressor with a single-piece baffle is created and named the SBR.
- 2015 AMTAC debuts all four suppressor lines at SHOT Show.
- 2016 OutdoorHub recognizes AMTAC among the Top New Suppressors at SHOT Show 2016.
- AMTAC releases it's Hornet suppressor - purpose built for pistol-caliber carbines.
